The Saga of STRIKE FORCE

In the year 2020 the first alien contact is made. From the farthest reaches of the galaxy comes a distress call. The Saurians, an evil reptilian race bent on conquering the universe, are currently invading the human colonized Beta System. The Saurians mutate all life forms they encounter into slaves for their evil empire. The only hope for the colonists and, perhaps, all of mankind is an elite team of fighters able to respond to the initial invasion.

Each player controls a Strike Force composed of a rocket fighter and a team of space marines in their powered battle armor. They must travel throughout the planets of the Beta System, battling the Saurians and their vicious minions. Unfortunately, defeating the Saurians on the planets surface is not enough. The Saurian megastar, which brought the alien invaders, is circling the solar system launching dreadnaughts. These large dangerous motherships travel to the planets delivering a never-ending supply of invading Saurians. The players need to destroy the dreadnaughts to prevent the retaking of their hard won planets. Ultimately though, they must attempt the destruction of the Saurian Megastar "Apocalypse" to end the invasion and win on the Saurian Front.

STRIKE FORCE Game Play

STRIKE FORCE is a one, or two-player game in which two players play simultaneously. Unlimited buy-ins are allowed at any time for either player. STRIKE FORCE is unique because it has unlimited open ended game play and an ultimate goal, which allows the players to win. Most games provide the player with a fixed series of encounters that do not change from game to game, STRIKE FORCE puts the player in charge of battling his/her way through a realistic environment. The player not only chooses where to go across a 3D- looking planetary surface, but also which weapon to use from an arsenal that accumulates as the game progresses. Once the Saurians are conquered on a planet, the player pilots his/her interplanetary shuttle to one of 22 different planets.

The Megastar is 40 screens long. The ultimate challenge of STRIKE FORCE is to chase down, enter, and get to the core of the enemy Megastar.

STRIKE FORCE

Operation and Troubleshooting

Safety Notices

The following safety hints apply to all game operators and service personnel. Specific warnings and cautions will be found throughout this manual where they apply. We recommend that you read this page, and also all of Section 1, before preparing your game for play.

WARNINGS

AC POWER CONNECTION. Before connecting the game to the AC power source, verify that the "line voltage selection chart" jumper wires are installed correctly for the line voltage in your area. For details, refer to Section 3.

PROPERLY GROUND THE GAME. To avoid electrical shocks, do not plug in the game until it has been inspected and properly grounded. MIDWAY games should only be plugged into a grounded 3-wire outlet. Shocks will also result, if the control panel is not properly grounded. After servicing any parts on the panel, assure that the ground wires are secure. Only then should you lock up the game.

DISCONNECT POWER DURING REPAIRS. To avoid electrical shock, disconnect the game from the AC power source before removing or repairing any part of the game. When removing or repairing the monitor, extra precautions must be taken to avoid electrical shock because high voltages may exist within the monitor circuitry and cathode ray tube (CRT) even after power has been disconnected. Do not touch internal parts of the display with your hands or metal objects! Always discharge the CRT. Attach one end of a large, well-insulated, 20-kV jumper to ground. Momentarily touch the free end of the grounded jumper to the anode by sliding it under the anode cap. Wait two minutes and discharge the anode again.

USE THE PROPER FUSE. To avoid equipment damage, use the replacement fuse which is specified in the parts list for this game. The replacement fuse must match the original fuse in fuse type, voltage rating, and current rating.

HANDLE FLUORESCENT TUBE AND CRT WITH CARE. If you drop a fluorescent tube or CRT and it breaks, it will implode! Shattered glass can fly eight feet or more from the implosion.

CAUTION

PROPERLY ATTACH ALL CONNECTORS. Make sure that the connectors on each printed circuit board are properly connected. If they do not slip on easily, do not force them. A reversed connector may damage your game and void the warranty. All connectors are keyed to fit specific pins on each board.

Setup Procedure

Installation and Inspection

1. Remove the game from its shipping carton, and inspect the exterior of the cabinet for any signs of damage. Remove the shipping cleats from the bottom of the cabinet.
2. Remove keys from the taped coin return slot (or attached to joystick). Unlock and open the coin and cash box doors. (Leg levelers and spare parts are stored in the cash box.)
3. Locate the four threaded holes on the bottom of the cabinet (one in each corner), and install one leg leveler (with its hex nut) in each hole.
4. Stand the cabinet upright and make certain that it is in a stable position. Level the cabinet.
5. Unscrew (or unlock) and remove the rear doors/panels of the cabinet. Inspect the interior for any signs of damage. Check all major assemblies to assure that they are mounted securely.
6. Refer to the game's cabinet wiring diagram (Section 3), and check to see that all cable connectors are correctly secured and firmly seated. **DO NOT FORCE CONNECTORS.** Watch for damaged connectors and avoid making reversed connections.
7. **Line Voltage Selection.** Your game is designed to work on the line voltage where you are located. Determine the value of your line voltage with a meter. Then, check the power input wires to the main power supply transformer on your game to be sure they are connected to taps which correspond to your local line voltage. If necessary, reconnect the power input wires to the transformer in accordance with the Transformer Chart in Section 3.

If the line voltage in your area falls outside the upper or lower limits of the range of voltage inputs covered by the main power supply transformer, **DO NOT PLUG YOUR GAME IN** until you have contacted your distributor or the MIDWAY Service Department and obtained a solution to the problem. Otherwise, you could damage your game.
8. Lay the line cord (connected to the Power Chassis) in the slot along the bottom edge of the lower rear cabinet door/panel. Install the rear cabinet door/panel and screw (lock) securely. Close and lock the front coin and cash box doors.
9. Connect the line cord to a grounded (3-terminal) AC wall outlet.
10. Switch ON the game, using the ON/OFF switch located on the upper left rear of the cabinet, to verify proper operation.

GAME LOCATION REQUIREMENTS

Power

Domestic 115V @ 60 Hz

Foreign 230V @ 50 Hz

Temp.

32° F to 100° F

(0° C to 38° C)

Humidity

Not to exceed 95% relative.

25" Cabinet (Front View)

25" Cabinet (Rear View)

Cabinet Assembly

Control Panel Assembly

Servicing

■ Servicing the Control Panel

Switch OFF power to the game. The control panel is held in place by latches (located on the left and right sides of the cabinet) which provide constant pressure on the strikes. The latches can be reached through the coin door opening. To release the latches, lift the latch handle and unhook the wire fasteners. Carefully use the joysticks to lift the control panel. Rest the panel on its support bracket, while working on it. To reinstall the control panel, check for proper cable connections, including the ground strap, and use the joysticks to lower it into position, avoiding pinched wires. Re-clamp the latches.

NOTE

To remove the control panel for bench servicing, release the latches (located on the sides of the control panel) and lift the control panel, until it rests on its support bracket. Note, be careful not to reach directly through the control panel as you might damage the Monitor's remote controls board. Disconnect the cables and the ground strap. Lift the control panel out of the game cabinet.

■ Removal of Viewing Glass

Switch OFF power to the game, and open the control panel. Remove mountings at the bottom of the glass and remove the protective black plastic strip. Carefully lift the glass from its bottom groove and lift it clear of the cabinet.

■ Removal of Monitor Bezel

Switch OFF power to the game, and remove the viewing glass. Remove the bezel securing screws to free the monitor bezel.

■ Monitor Replacement

Read the WARNINGS section thoroughly before beginning this procedure.

Switch OFF power to the game. Open the upper rear door/panel. Remove the viewing glass and the monitor bezel. Completely disconnect the monitor from all of its cabling, including its chassis ground strap. Remove the four bolts securing the monitor's mounting flanges to its mounting panel. Pull the monitor carefully from the cabinet front.

CAUTION

The monitor DOES NOT contain an isolation transformer in its chassis (it is mounted instead in the Power Chassis Assembly located on the floor of the cabinet). When servicing the monitor on a test bench, YOU MUST ISOLATE THE MONITOR FROM THE LINE VOLTAGE WITH AN ISOLATION TRANSFORMER.

CAUTION

While removing the four bolts, firmly support the monitor from the front of the CRT so that it will not slip.

WARNING

If you drop a fluorescent tube and it breaks, it will implode! Use care in handling.

■ Removal of the Marquee Glass

Switch OFF power to the game. Remove the screws in the black plastic strip on top of the cabinet. Remove the strip and carefully lift the glass. Store the glass carefully to prevent damage.

The fluorescent tube is now accessible for replacement. Remove plastic or cardboard lock, if necessary. Grasp the tube, give it a quarter turn, and remove it from its socket. Carefully place a new tube into the socket, and turn to reinstall.

■ Removal of the Fluorescent Light Assembly

Switch OFF power to the game. Remove the marquee glass. Disconnect the fluorescent light assembly from its power cable. Remove the screws fastening the assembly to the cabinet and lift out the assembly.

■ Removal of the Speakers

Switch OFF power to the game. Remove the upper rear cabinet door/panel, taking care to *not* damage the speaker enclosure seals. Disconnect the speakers from their cabling. Remove the nuts on the speaker mounting bolts. Remove the speakers. Because the speakers are mounted in an acoustical enclosure, carefully reinstall the seals upon completing any task in the speaker enclosure.

■ Volume Control, Test/Diagnostics Switch, and Service Credit Switch

Open the coin door to locate the game's volume control and Diagnostic switches on the small panel atop the cash box cover. The Volume Control is the white knob on left end of the panel. Turning the knob clockwise increases the sound level. The upper right switch on the bracket is the Test/Diagnostics Switch that enables activating the game's test mode. The lower right switch is the Service Credit Switch, which allows adding credits to a game for service testing without affecting the game's bookkeeping total.

Game Features

Start Up

Switch ON power to the game. A "rug" pattern appears on the CRT screen. When the "rug" pattern ends, the screen shows CHECKING SCRATCH RAMS, and then CHECKING ROMS. The next screen shows REVISION LEVEL, CMOS TEST OK and the COIN SETTING. The game then moves to the attract mode. After the proper coinage has been inserted, the game exits the attract mode and enters the play mode.

Player Controls

Each player has an 8-way joystick and four buttons. The joystick controls the movement of the ship. The buttons are Start/Transform, Fire, Weapon and, Weapon Select.

■ Each **START/TRANSFORM** button is used to start or continue a game. If a game is in progress, this button toggles the player between ship and turret modes. The ship is more mobile than the turret, but the turret has better firepower. During a 2-player game, if one player is the ship and the other player is the turret, the turret is docked onto the ship unless the player does a quick double-click on the START/TRANSFORM button when transforming.

■ Each **FIRE** button is used to fire the player's standard weapon. When this button is held down, the weapon goes into rapid-fire mode. The Rapid Fire Counter is incremented by 100 each time a Rapid Fire Icon is picked up. The greater the Rapid Fire Counter value, the faster the weapon fires.

■ Each **WEAPON** button is used to fire the special weapons in the player's arsenal. The player is awarded special weapons by starting or continuing a game, by finding them on the planet's surface or, by rescuing colonists. When two players are docked together, they are both awarded a picked up weapon. There are over twelve weapons to discover and master.

■ Each **WEAPON SELECT** button is used to select weapons in the player's arsenal. Players accumulate weapons and use them as needed. The weapon currently being used is in a flashing box. Each time the WEAPON SELECT button is pressed, the current weapon moves to the end of the arsenal and the rest of the weapons are shifted one to the left. The game announces the name of the chosen weapon so the player knows what is selected without watching the arsenal. It's helpful to keep the sound level loud enough to hear the game's speech clearly.

STRIKE FORCE is a one or two player game that allows two players to play simultaneously.

NOTE

When an error is detected during Start-up Tests, game start-up does not progress, and an error message appears on the screen.

Game Operation

STRIKE FORCE is a one- or two-player video game with a color monitor. From the player's perspective, the game has two modes of operation: Ready-to-Play and Play. For the owner/operator, the game has an additional mode of operation called Game Diagnostics and Adjustments.

Control Switches

- The **SLAM TILT SWITCH** detects any forceful vibrations against the Coin Door. This eliminates pounding for free games.
- The **VOLUME CONTROL** allows increasing or decreasing the sound level of the game's music and speech. For greater earnings, set your game's sound level at its maximum.
- The **TEST/DIAGNOSTICS SWITCH** allows you to enter the Game's Diagnostics mode. Move the Test Switch left to enter the Game Diagnostics mode. To exit this mode, move the Test/Diagnostic Switch right.
- The **SERVICE CREDIT SWITCH** is a special-feature switch that provides credits during game testing without affecting the game's bookkeeping total.
- The **POWER INTERLOCK SWITCH** is a safety switch that ensures power to the game switches off during servicing. This switch is located inside the lower rear door/panel.

Game Audits, Diagnostics & Adjustments

Operation

All Game Audits and Diagnostics are accessible via the Test/Diagnostic Switch and the Service Credit Switch located inside the coin door. Game Adjustments are set or changed using the DIP switches located on the CPU Board.

GAME AUDITS

To access the Audit Table, move the Test/Diagnostic switch (on the cashbox lid) to the left. To clear the Audits, move both joysticks toward the center of the Control Panel.

Note: Audits cannot be set; they can only be cleared.

To exit the Game Audit Table, move the Test/Diagnostic Switch to the right.

AUDIT TABLE

Audit	Audit Value
Left Chute (# of Left Chute Coins)	0
Right Chute (# of Right Chute Coins)	0
Center Chute (# of Center Chute Coins)	0
Fourth Chute (# of Fourth Chute Coins)	0
Service Credits (# of Service Credit Coins)	0
Credits Played (# of Credits Played - sum of starts & continues)	0
Player 1 Starts (# of times Player1 started a Game)	0
Player 2 Starts (# of times Player 2 started a Game)	0
Player 1 Continues (# of times Player1 continued a Game)	0
Player 2 Continues (# of times Player 2 continued a Game)	0
One Player Seconds (# of seconds for one player game)	0
Two Player Seconds (# of seconds for two player game)	0
Plays to High Score Reset (# of plays without making H. S. until Reset)	0
Average Seconds per Credit (Average # of seconds played per Coin)	0
Burn-in Loops (# of Burn-in Loops completed)	0
Credits (# of unplayed Credits available)	0
Idle Minutes (# of Idle Minutes)	0
Wins (# of Games played to Completion; starbase destroyed)	0

DIAGNOSTIC TESTS

To access the Tests/Diagnostic Mode, first move the Test/Diagnostic Switch to the left. The Audit Table is shown.

To exit the Test/Diagnostic Mode from any test, move the Test/Diagnostic Switch to the right.

CPU Test

To enter the CPU Test from the Audit Table press the Player 2 Weapons Button.

The CPU Test allows the operator to check the game's memory RAM and program ROM chips. The screen shows the layout of the RAMs and ROMs on the CPU Board. A good chip turns green. A faulty chip turns red. If no error is found the test cycles back to the Audit Table.

Burn-in Test

To access this test from the Audit Table, press the Player 1 Weapons Button.

The Burn-in Test repeats some of the Diagnostic Tests continually. When the Burn-In Test detects a error, the test stops. Use this test to detect intermittent problems that may not show up during the initial tests.

NOTE

There are front-mounted monitor controls (beneath the monitor and within the Control Panel opening) for easier monitor adjustments.

Adjust the black level to just before the black portion turns gray. Adjust the contrast to just before the text starts to blur.

Monitor Test

To access the Monitor Test from the Audit Table, press the Player 1 Start Button.

This test allows the operator to check the monitor operation. There are red, green, and blue screens provided for color adjustments, as well as a crosshatch pattern for alignment adjustments.

During the Monitor Test, the colors should appear sharp and clear. The crosshatch pattern fills the screen with a grid of lines and dots. The pattern should be clear, and the dots should be round.

DIP Switch Test

To access the DIP Switch Test from the Monitor Test, press the Player 1 Start Button.

The DIP Switch Test allows the operator to check the CPU Board DIP Switch settings.

Switch Test

To access the Switch Test from the DIP Switch Test, press the Player 1 Start Button.

The Switch Test allows the operator to check the switches. Pressing a switch causes the corresponding switch location on the screen to light. Release the switch, and the screen returns to normal.

GAME ADJUSTMENTS

To change the Game Adjustments, use the DIP switches on the CPU.

The Adjustments allow the operator to change the game Pricing and Difficulty levels, among other game features. Use the following DIP Switch Tables to change the desired adjustment.

DIP Switch 1

	SW 1	SW 2	SW 3	SW 4	SW 5	SW 6	SW 7	SW 8
Difficulty								
Level 1	Off	On	On					
Level 2	Off	Off	On					
Level 3	Off	On	Off					
Level 4*	Off	Off	Off					
Level 5	On	Off	Off					
Level 6	On	Off	On					
Level 7	On	On	Off					
Level 8	On	On	On					
Ships per Credit								
3*				Off				
4				On				
Point per Extra Ship								
40,000					Off	On		
50,000*					Off	Off		
75,000					On	Off		
100,000					On	On		
Start/Continue								
1 credit start, 1 credit continue*							Off	
2 credits start, 1 credit continue							On	
Coin Meters								
Meter 1 sums all switches								Off
Meter 1=switch 1, (3); Meter 2=switch 2, (4)								On
(UK Electronic Door-Meter 1 is #10 Pence units through all switches.)								

Note: * denotes factory setting

DIP Switch 2

	SW 1	SW 2	SW 3	SW 4	SW 5	SW 6	SW 7	SW 8
Game Mode*	Off							
Test Mode	On

1 coin, 6 credits						On	Off	On
UK Electronic Door								
chute 1 - 1 pound, 7 credits						On	On	Off
chute 2 - 50 pence, 3 credits								
chute 3 - 20 pence, 1 credit								
chute 4 - 10 pence, 1/2 credit								
Free Play						On	On	On

Note: * denotes factory setting

Troubleshooting

Problem	Possible Solution
NO PICTURE OR DISTORTED PICTURE.	Check for faulty CPU Board or monitor. Check for disconnected video signal cable.
TURN GAME ON & NOTHING HAPPENS	Check line fuse. Check for +5V DC at pins C, D, 3, and 4 of the JAMMA Connector.
NO SOUND	Check the speaker and speaker connection to pins L and 10 on JAMMA Connector. Check volume control setting. Check for +12V DC at pins F and 6 on the JAMMA Connector. Check interboard wiring from CPU Board to Sound Board.
MOVE JOYSTICK, AND OBJECTS DO NOT MOVE	Check for open wires between joystick and CPU Board. Check for contamination on joystick switch contacts and CPU Board pins. Check for proper ground.
PRESS CONTROL PANEL BUTTON AND NOTHING HAPPENS	Check for open wires between button and CPU Board. Check for contamination on CPU Board pins or button switch blade contacts. Check for proper ground.
NO CREDIT GIVEN WHEN COINS ARE INSERTED	Check DIP switch coin setting. Check for contamination on coin switch contacts. Check for an open wire between Coin Switch 1 and pin 16 on JAMMA Connector or Coin Switch 2 and pin T of JAMMA Connector.
TOO MANY CREDITS FOR NUMBER OF COINS INSERTED	Check Game Pricing setting. Check for a short between pins T & 16 on JAMMA Connector.
GAME STAYS IN THE TEST MODE.	Check that the Test Switch in the coin door is set to OFF.

			5010-09086-00	R	Resistor, 6.8K, 1/4W, 5%

NOTES:

- 21 capacitors (shown on diagram with "B" symbol) provide +5VDC filtering for ICs.
- All capacitors are ceramic, 50v, axial, unless otherwise noted.
- All resistors are 5%, 1/4w, Carbon Film, unless otherwise noted.

WARNINGS & NOTICES

Warning

USE OF NON-MIDWAY PARTS OR CIRCUIT MODIFICATIONS MAY CAUSE SERIOUS INJURY OR EQUIPMENT DAMAGE! USE ONLY MIDWAY AUTHORIZED PARTS.

* For safety and reliability, substitute parts and modifications are not recommended.

* Substitute parts or modifications may void FCC type acceptance.

* This game is protected by Federal copyright, trademark and patent laws. Unauthorized modifications may be illegal under Federal law. This also applies to MIDWAY logos, designs, publications and assemblies. Moreover, facsimiles of MIDWAY equipment (or any feature thereof) may be illegal under federal law, regardless of whether or not such facsimiles are manufactured with MIDWAY components.

Warning

This equipment generates, uses and can emit radio frequency energy and, if not installed properly and used according to the directions in this manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of part 15 of FCC rules which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference to radio communications, in which the user, at his or her own expense, will be required to take whatever measures may be needed to correct the interference.

Warning

Prevent shock hazard and assure proper game operation. Only plug this game into a properly grounded outlet. Do not use a cheater plug to defeat the power cord's grounding pin. Do not cut off the ground pin.

Notice

When MIDWAY ships a game, it is in compliance with FCC regulations. Your sticker is proof. If the sticker is missing or damaged, legal repercussions to the owner or distributor of the game may result. If your game does not contain an FCC sticker, call MIDWAY immediately.

Notice

No part of this publication may be reproduced by any mechanical, photographic, or electronic process, or in the form of a phonographic recording, nor may be transmitted, or otherwise copied for public or private use, without permission from the publisher.
