

LOADING:

- 1) Switch computer off and remove any cartridges.
- 2) Switch on data recorder and TV/monitor.
- 3) Whilst holding down the **START** and **OPTION** keys, switch the computer on.
- 4) After the short tone, release the start and option keys and press **RETURN**. The programme will now load automatically.

(The programme is recorded on both sides of the tape. In case of loading difficulty, turn the tape over, rewind to the beginning and load again.)

IMPORTANT: WIND TAPE OFF LEADER BEFORE LOADING.

CONTROLS:

Joystick in Port 1. Fire to Start.

Submarine: Left/Right/Up/Down as normal. Fire to launch Scoutcraft.

Scoutcraft: Left/Right/Up/Down as normal. Fire to launch Missile. Dock with Submarine to pass control back to Submarine.

GAME:

It is the year 2007 and the 'Vax 3000' super computer at Britain's vast undersea nuclear missile base has malfunctioned. Unless shut down it will launch hundreds of missiles around the world, triggering global thermo-nuclear war. Unfortunately the computer has sealed all entrances to the complex as part of the present battle procedure. The only way to the computer is through the underwater access tunnels used during construction.

Controlling your submarine and scoutcraft, you must navigate these tunnels and collect the 8 digits of the pass code required to shut down the computer. On the way you must find the numbered

Continued

keys necessary to open the electronically sealed doors and at the same time, collect the extra fuel that you require for your long and dangerous journey. To make your task even more difficult, you must also locate and destroy 6 reactor pods hidden behind walls that only offer a small moving gap through which you can aim a missile.

REMEMBER — Collision with walls, crushers, lasers and automatic doors is fatal. **Don't** lose 3 scouts or you lose your current submarine. **Don't** lose a submarine as you will also lose all the scouts in it. **Don't** shoot your submarine and **Don't** run out of air or fuel. Above all, **Don't Give Up.**
