

APOLLO 2

LOADING INSTRUCTIONS
LOAD"" (Press Enter).

The Aim of the Game

You are the commander of the Lunar Exploration Module (LEM) Apollo II. Due to a computer malfunction you must land under manual control. Your mission is to land on the moon to carry out valuable experiments to determine whether the environment could sustain any life forms. Landing on low ground will save you precious fuel and achieve a good score. The smaller the landing site the more skill you need, therefore, the higher the bonus points.

Your instruments are:

VSP	HSP	RSP	ATT	FUEL
Verical speed	Horizontal speed	Rotational speed	Attitude	Fuel gauge
+ Up	+ Right	+ Clockwise	0 = Upright	
- Down	- Left	- Anticlockwise		

Each of these has a light which is green if the reading is safe, red if unsafe. To land safely you must have four green lights.

Operating instructions

Keys - 0 to rotate Left

Keys - P to rotate right

Keys - CAPS SHIFT to thrust

Keys - SPACE to abort

You cannot abort if your fuel is low

GOOD LUCK !!!!!!!!!!!!!!!
