

HOW TO LOAD

Place the cassette in the tape recorder and make sure that the tape is fully rewound. Connect the cassette to your Spectrum computer as described in your Spectrum manual.

Type in LOAD "" and press ENTER. The program takes just under two minutes to load.

If you should have problems in loading, try adjusting the volume and tone settings on your tape recorder and try again.

PLAYING THE GAME

It is your task as Sir Lancelot to investigate the 24 rooms in the castle and to collect all the things of use to you as you go.

These items may come in many forms, but you will be able to recognise them on the screen as they flash colours.

This task sounds simple, but to pass through each room you must collect all the items present in that room and then reach the exit. The other problems you will have to face are the animals guarding the treasure.

Fortunately you are given four life restorers – these are your only hope of survival.

HOW TO CONTROL SIR LANCELOT

Only three keys are needed to control Sir Lancelot. These are LEFT, RIGHT and JUMP. The keyboard has been configured as follows:

Q, E, T, U or O	Move left
W, R, Y, I or P	Move right
Shift to Space	Jump

The game is also compatible with a wide variety of joysticks.
